Beverage Mixer/Aerator

ABSTRACT

- A beverage mixer/aerator for attachment to a hand-held housed motor includes an agitator for immersion in a beverage and a rotational driveshaft to which the agitator is affixed. The driveshaft has an air inlet port, an air outlet port at or adjacent to the agitator and a longitudinal passageway extending from the air inlet port
- 10 longitudinal passageway extending from the air inlet port to the air outlet port. The agitator draws air down through the passageway to improve infusion of air into a beverage in use.
